Report Title (Times New Roman, 20 pt., Bold)

Introduction to Database System, CS352, Fall 2022

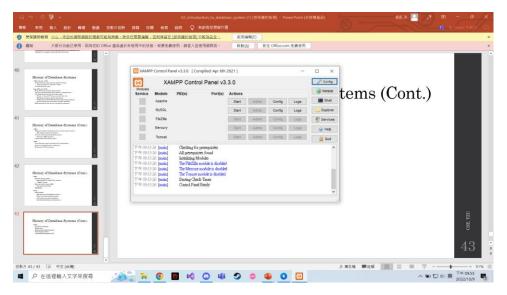

Class: 資工系三年級 C 班 Name: 孫暐鎧 ID: 1093306

1. Use XAMPP (https://www.apachefriends.org/) to build your own database system:(我下載 windows 版本)

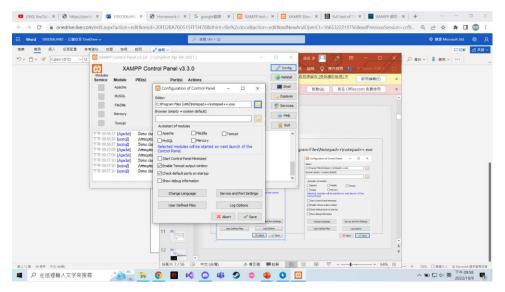

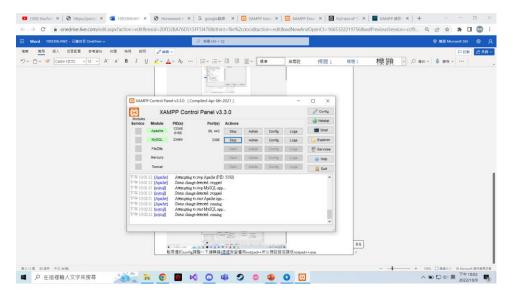

勾選 MYSQL+PHP+phpmyADmin

下載完成後開起 XAMPP 的介面

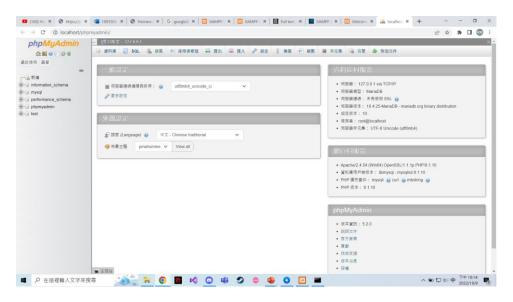

*額外小設定:點旁邊的 config 調整一下編輯器(這裡我習慣用 notpad++所以預設路徑調成 notpad++.exe

開啟 apache 和 MYSQL 並且開啟 MYSQL 的 ADMIN 就可以進到後台(先開 apache 的 ADMIN 確定 PHP

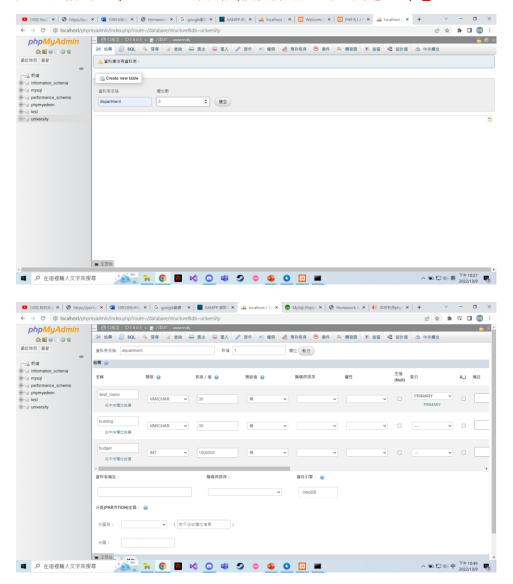

2. Create a database named "university"

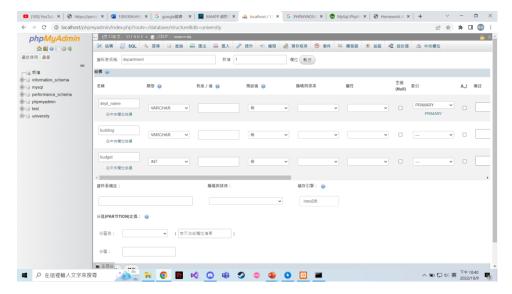

點選資料庫並建立名稱 "university"的資料庫

3. Crate a table named "department" and refer to the information of Figure 2.5, page 41 in the textbook. 建立名稱為"department"的表格(欄位數調整為 3 對應 dept name、 building 、 budget

建立表格總共有三欄 dept_name、 building 、 budget 他們的屬性分別為 varchar 、 varchar 和 int,長度分別為 30.30.30(10000000 後面改掉了它是寬度的意思所以它超出上限 255 出現 ERROR)

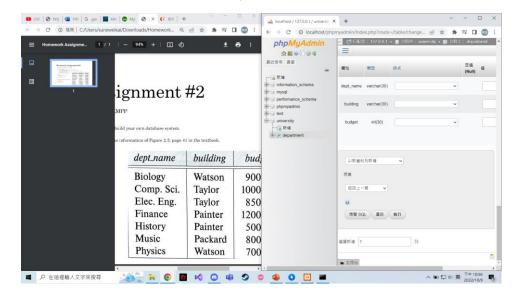

4. Use "dept name" as the primary key

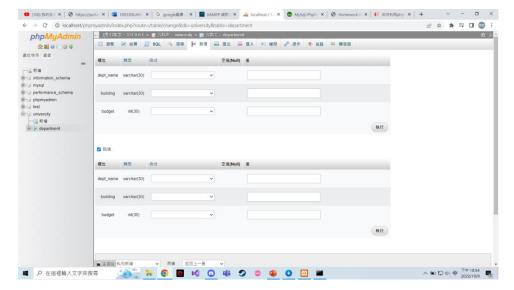

把 dept name 索引改成 PRIMARY 然後儲存完成後如下圖

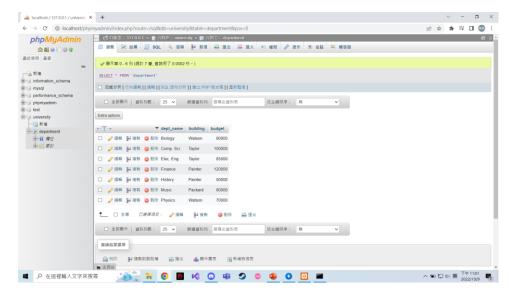

5. Use the data (Figure 2.5, page 41) as you input.

接下來點新增加入表格的資料*(我這裡調整繼續新增{7}列再輸入資料

新增完成瀏覽畫面如下

列印畫面如下
